**EURUSD M5 Trade example - Order block entry**

- PDL manipulation - we receive the notification
- we wait for the BOS break of structure
- we got BOS - is FVG included in swing that broke the structure? Yes! It means smart money are trading the reversal has a high probability
- we identify the Order block (consecutive down candles before the break with displacement) for more accuracy we use last down candle before the explosive move.
- keyboard shortcut B we bring the buy trade visual projection to the upper side of OB and adjust the SL below the liquidity raid and Target 3R in the left bottom corner you will see your Risk reward, lot size and risk
- Activate the trade by clicking the smiley or click pending button trade manager will place the order for you.
- Once you are in the position, trade manager will manage the position for you with partial close and moves SL to BE. (You must have PC on or run it on the VPS)

These were 3 basic examples of entries. We have learned that you need to see PDL/PDH level manipulation, followed by pullback with the Break of the structure which must include displacement (candle with fair value gap - FVG). Then we look for a pullback at least 50% for the entry Below/above 50% pullback we want to enter in the Order block - OB, FVG - Fair value gap or OTE - Optimal trade entry - 70.5% fib - which is the way I recommend to the beginners.

EURUSD M5 Trade example - Optimal trade entry (OTE 70.5 Fib pullback)

- PDL manipulation - The Indicator sends the pus notification
- we are monitoring for the BOS
- we got BOS - is FVG included in the swing that broke the structure? Yes! It means smart money is trading the reversal has a high probability
- we plot the move the mouse to swing low and press keyboard shortcut F. Fib will automatically appear. Adjust to swing high lows
- Keyboard shortcut B will plot long trade projection. Adjust it to 70,5 fib and adjust the SL below the liquidity raid and Target 3R in the left bottom corner you will see your Risk reward, lot size and risk
- Activate the trade by clicking the smiley or click pending button trade manager will place the order for you.
- Once you are in the position, the trade manager will do a partial close and moves SL to BE. (You must have PC on or run it on the VPS)

AUDUSD M1 Trade example entry from the FVG

- PDH manipulation - Indicators send the notification
- we monitor the market for the BOS with FVG
- we got BOS - is FVG included in the swing that broke the structure? Yes! It means smart money is trading - the reversal has higher probability
- we place the trade by using Trade manager - bring the mouse cursor where you want to place your trade (FVG) - Keyboard S will bring short trader projection
- Adjust the entry to the FVG, SL above the Swing and Target 3R in the left bottom corner you will see your Risk reward, lot size and risk
- Activate the trade by clicking the smiley and entry line will change to purple. It means once the line is hit trade will be open. Or you can click the pending on the right corner, and it will place a pending order
- Once you are in the trade. Trade manager will manage the position for you (you must have a PC on or run it on the VPS)
